

# FCS Project - Security Vulnerabilities

## Group 9

Mihir Chaturvedi - 2019061

### 1. User / admin login is giving me an error, thus I am not able to continue forward with any action

The image displays a web application interface with a login error message and a browser console showing multiple JavaScript errors.

**Web Application Interface:**

- The page shows a search bar and product listings for "Macbook Pro", "Percy Jackson Book Set", and "Rick Jordan".
- A modal dialog box is displayed with the title "Error" and the message "Could not login!! Please try again...". It includes an "OK" button.

**Browser Console:**

- The console shows multiple "TypeError: Cannot read properties of undefined (reading 'activeCustomer')".
- There is a "SweetAlert2: Unknown parameter 'callback'" warning.
- The console also shows a deprecation warning: "[Deprecation] Synchronous XMLHttpRequest on the main thread is deprecated because of its detrimental effects to the end user's experience. For more help, check <URL>".
